

HPE AND ASCERT

HPE Migration Services and Ascert System Testing

Working together. Accelerating results.

A NEW STYLE OF PARTNERING

Hewlett Packard Enterprise and Ascert are collaborating in a fresh new way to bring increased value to customers like you.

We know that acquiring technology is only the first step in achieving a business goal. The technology pieces need to work together. They need to be tested. They need to provide rich functionality, quickly and effectively, so you can concentrate on your business needs.

To help satisfy these needs, Ascert is a member of the HPE Partner Ready for Technology Partner program, an industry-leading approach to supply sophisticated integrated technologies in a simple, confident, and efficient manner.

Ascert has access to the right tools, processes, and resources to help our joint customers accelerate innovation and transformation that brings value, achieves business needs, and increases revenue and market share.

Ascert Testing Technologies

VersaTest Automator is an automated testing tool that delivers a simple solution for testing complex enterprise environments. These environments utilize multiple devices and applications that demand true end-to-end automated testing, as well as the flexibility to interoperate with multiple testing tools.

Implementing simulators to replace live interfaces address many of the problems inherent in repetitive tasks. But, simulation on its own does not provide automation. True automated testing needs additional levels of management reporting, integration and control that simulators on their own cannot provide.

VersaTest Automator addresses these additional needs enabling the integrated end-to-end testing of more complex environments in a highly automated manner. Test steps can involve multiple devices and applications, making the process of specifying and performing tests in heterogeneous environments almost trivial.

Relate is an intelligent data comparison and maintenance facility. It dynamically reads record definitions contained in DDL dictionaries or COBOL copybooks, in order to perform field-level operations on Enscribe files. Relate can also be used to intelligently compare database files, using algorithms appropriate to the types of file being compared.

NonStop Migration Testing Services

Migration Testing Services from HPE and Ascert provide everything necessary to ensure that platform migrations happen in a seamless fashion. Using this service, you can leverage the depth of technical capabilities combined with established HPE File Storage migration methodologies, which may help align with your organization's requirements, budgets, and timelines.

Testing prior to going live is critical to ensure the elimination of downstream system bugs, errors, and performance issues. By using the combined resources and expertise of HPE and Ascert associates, your migration test plan can be developed, refined, and executed while you focus on other aspects of your platform migration. Using the **VersaTest** and **Relate** products, combined with a full set of testing types, ensures that software, databases and expected performance operates as desired prior to going live.

COMPANY OVERVIEW

About Ascert

Ascet is recognized as a leading provider of premier testing software solutions. Ascet was founded in 1992 to provide automated software testing solutions that help companies measure the performance, reliability and scalability of their mission-critical back-end servers and applications. With over 100 clients worldwide, Ascet's products and services are used at some of the world's most successful companies.

Off-the-shelf simulators for Ascet's VersaTest product include solutions for EFT testing, POS testing, stress testing, ATM testing, Fraud testing, IFX testing, EMV/chip card testing, ISO8583 testing and 3270 and 6530 terminal testing. Ascet's custom simulators have been used for testing air traffic control systems and biometric payment systems. Ascet delivers flexible solutions that are either customer site installed or accessed via Ascet's Remote Testing Services. Ascet's products assist testing professionals across industry segments to better manage their testing processes and environments through an end-to-end toolset.

About Hewlett Packard Enterprise

Hewlett Packard Enterprise is a global technology leader focused on developing intelligent solutions that allow customers to capture, analyze, and act upon data seamlessly from edge to cloud. HPE enables customers to accelerate business outcomes by driving new business models, creating new customer and employee experiences, and increasing operational efficiency today and into the future.
